BIRCH STEWART KOLASCH & BIRCH PO BOX 747 FALLS CHURCH, VA 22040-0747			GEBREMARIAM, SAMUEL A	
			ART UNIT	PAPER NUMBER
			2811	
DATE MAILED: 03/20/2006				

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b> 10/786,125	<b>Applicant(s)</b> BERRY ET AL.	
	<b>Examiner</b> Samuel A. Gebremariam	<b>Art Unit</b> 2811	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 11 January 2006.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-4 and 8 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-4 and 8 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 11 January 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

**DETAILED ACTION**

***Drawings***

1. The drawings filed on 1/11/2006 are accepted by the examiner.

***Specification***

2. The changes made to the specification are acceptable by the examiner

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-4 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Glenn et al., US patent No. 6,528,875 in view of Uchikoba US patent No. 6,698,084.

Regarding claim 1, Glenn teaches (fig. 1a): a co-fired (stacked ceramic is fired together) multilayer laminate ceramic (fig. 1a and col. lines, 35-37); plurality of stacked layers of ceramic material (30,32,34) including metallization (19, 21, where vias 21 are filled with conductors) in predetermined patterns on and through the layers (30 and 32); the stacked layers including a plurality of exposed electrical conductors (layer 19 that is exposed and connected to 20) to which leads (18) are to be bonded; the conductors being of a metal which includes one or more additives to promote adhesion to the ceramic layer (conductor 19 is formed of gold-nickel alloy) on which the conductors are deposited (gold-nickel alloys adheres well on ceramic); a bonding metal layer (20) on

Art Unit: 2811

top of the conductors (19) at predetermined locations and the leads (18) being bonded to the bonding metal layer (20).

Glenn does not explicitly teach that the bonding metal layer being of the same metal as the conductors, however devoid of the one or more additives.

Uchikoba teaches (figs. 1A-1C) forming a conductive electrode (43) that is formed of gold and nickel and connected a gold bump (31, no nickel) in the structure of forming a semiconductor device package.

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the gold-nickel to gold connection taught by Uchikoba in the structure of Glenn in order enhance the reliability of the bonding during operation. Therefore the combined structure of Glenn and Uchikoba teaches the bonding metal layer being of the same metal as the conductors (gold), however devoid of the one or more additives (nickel is taken to be the additive).

Regarding claim 2, Glenn teaches substantially the entire claimed structure of claim 1 above including the bonding metal layer is deposited on a limited area of a the conductor only where the lead is to be bonded (refer to fig. 1a).

Regarding claim 3, Glenn teaches substantially the entire claimed structure of claim 1 above including the conductors are of a gold paste/layer (layer 19 is gold with nickel as the additive) with the additives; bonding metal layer is of a pure gold paste/layer (layer 31 of Uchikoba is formed of only gold) devoid of the additives (no nickel).

Regarding claims 4 and 8, Glenn teaches (fig. 1A) substantially the entire claimed structure of claim 1 above including predetermined ones of the layers (30,32,34) include respective cavities (recess 42 and vias 21); predetermined ones of the conductors (19 on 32) being located on at least one said layer (32) below the top layer (34) of the stacked layers (30,32,34); the predetermined ones of the conductors (19) being accessible through the cavities (42) for bonding of the leads (18).

The limitation of the "low temperature co-fired ceramic (LTCC) structure" is considered a product-by-process claim. "[E]ven though product-by process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985).

### ***Response to Arguments***

5. Applicant's arguments filed on 1/11/2006 have been fully considered but they are not persuasive. Applicant argues that the Uchikoba reference is not analogous either to the first reference or to the present application because, Uchikoba is only related to bonding a ceramic piece to a circuit while the present claims relate to a plurality of stacked layers of ceramics including metallization in predetermined layers. Applicant further argues that there is no motivation to combine these references without the benefit of the applicant's disclosure as a template in restructuring the art.

In response to applicant's argument that the Uchikoba reference is nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, Glenn teaches a structure that is used to package MEM devices. In order to form such a structure Glenn uses a co-fired (fired together) multi-layered ceramic structure. Uchikoba teaches a ceramic multi-layer structure (40) and fifteen inner conductive layers (41) in order to form a surface acoustic wave element that is also a well-known MEMS device. Therefore the references of Glenn and Uchikoba are within the same field of endeavor and therefore the references are combinable.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Glenn clearly teaches (refer to the rejection above) the claimed structure except explicitly stating that the bonding metal layer is of the same metal as the conductors, however devoid of the one or more additives. However Uchikoba teaches (figs. 1A-1C) forming a conductive electrode (43) that is formed of gold and nickel and connected a gold bump (31, no

Art Unit: 2811

nickel) in the structure of forming a semiconductor device package. Therefore a person of ordinary skill in the art at the time the invention was made would be motivated to bond pure gold on gold nickel alloy in order to improve the reliability of the bonding.

### **Conclusion**

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

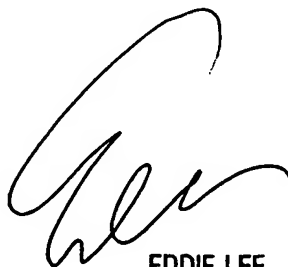

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Samuel A. Gebremariam whose telephone number is (571) 272-1653. The examiner can normally be reached on 8:00am-4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie Lee can be reached on (571) 272-1732. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
